

Intrauterine Insemination

-  Ultrasound scan
-  Daily FSH injection
-  Trigger injection
-  Luteal phase support medication
-  Blood hormone test

IMPORTANT

- ◆ Medication dose and administration dates will be prescribed by your fertility specialist
- ◆ Vaginal scans may need to be repeated during your cycle. Please empty bladder before a scan
- ◆ Urine testing kits can be supplied by the clinic. Start testing when advised by your nurse
- ◆ Cycles may be cancelled due to over or under responsive or formation of ovarian cysts
- ◆ IUI will occur on day of ovulation
- ◆ Please note once hormone blood test commences, you will be required to attend blood tests daily until ovulation determined.
